4	Algorithm through Flow-chart	Page 8-9
5	Control-Break or Paging Logic	Page 10-11
6	Validation and Invalid Entry counts.	Page 12-13
7	Program code as per COBOL Standards.	Page 14 -25

Introduction

1.1. Background

Mobile phones have become an essential part of our lives, and to keep the calling, internet and other processes going, we need to make our mobile recharge on time. ABC Recharge Portal provides the customer with a wonderful experience of making online mobile recharge.

1.2. Purpose

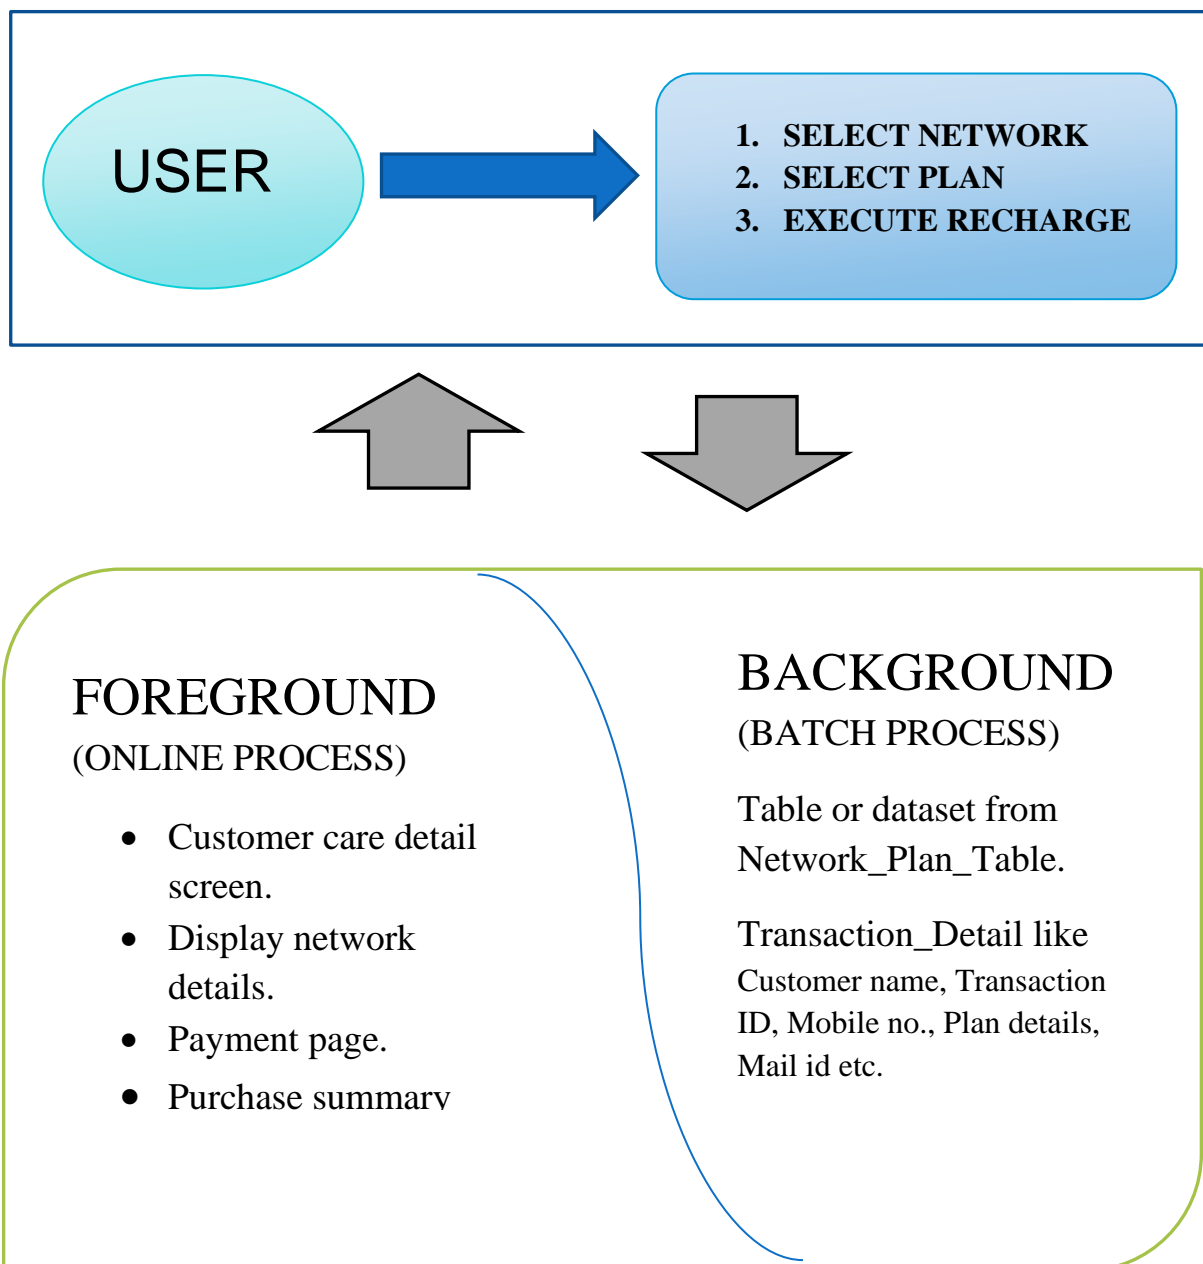

It is proposed to develop a Portal for OMRP that will allow the customer to select the network, plan and recharge for mobile. The OMRP process will have both on-line and batch process to cater to the following functionality.

1.3. Scope

The scope of the OMRP will be to provide the functionality as described in Functional Requirements.

High Level Documentation (HLD)

Aim: - To generate a Transaction Summary Report from Transaction Table by using batch processing.

Low Level Documentation (LLD)

Step-1 - By using JCL, we would create a KSDS (vsam file) by defining a cluster with suitable values for record size and key position needed.

```

F8=Down      F9=Swap      F10=Left    F11=Right    F12=Cancel
R  A                                               04/15

```

Step-2 – On the other side with the help of COBOL programming we select the temporary/workfile and assign it to a physical file (KSDS) which we have created on step-1.

```

000007 000700 FILE CONTROL.
000008 000800 SELECT TSCR-FILE ASSIGN TO TSCRDD
000009 000900 ORGANIZATION IS INDEXED
000010 ACCESS IS SEQUENTIAL
000011 RECORD KEY IS TRANSACTION-ID OF TSCDT
000012 001000 FILE STATUS IS TSC-STAT.
000013 000800 SELECT REP1-TSC-FILE ASSIGN TO REPTSCDD
000014 000900 ORGANIZATION IS SEQUENTIAL
000015 ACCESS IS SEQUENTIAL
000016 001000 FILE STATUS IS REP-TSC-STAT.

```

Step-3 – We will also repeat the similar procedure for assigning a PS file, which we will use to generate the summary report on.

Step-4 – Now after assigning the workfiles in File-control section, we would not provide the File-description needed for that

Step-5 – In work-storage section we would define the structure of the report through different group variables and elementary items.

Step-6 – In procedure division we have various paragraphs like main-para, open-para, read-para, close-para etc. through which we would perform various operations.

Let us have a brief view of application of each para used in the program...

A. MAIN-PARA- In this para the sequence or order of execution of all para are determined, the flow of the entire program is decided through this para, even though the order of para written may differ but the execution part is done based on sequence mentioned in main-para.

```
000100 S03300 MAIN-PARA.
000101 003400     PERFORM OPEN-FILE-PARA.
000102         *   PERFORM READ-FILE-PARA.
000103         *   PERFORM WRITE-FILE-PARA 3 TIMES.
000104 003400     PERFORM REP-HEAD-PARA.
000105             PERFORM REP-COL-PARA.
000106             PERFORM REP-ENTRY-PARA.
000107             PERFORM READ-FILE-PARA UNTIL TSC-STAT = '10'
000108         *   PERFORM WRITE-FILE-PARA UNTIL TSC-STAT = '10'
000109         *   PERFORM REP-FOOTER-PARA.
000110 003600*     PERFORM CLOSE-FILE-PARA.
000111 003700     STOP RUN.
```

B. OPEN-FILE-PARA-This para is used to open the both TSCR-FILE & REP1-TSC-FILE which are the temporary files assigned to the KSDS (input) and PS (output) file.

```

DIT          CAPGB28.ABHI.NEWPDS(OMRPBT1) - 01.21          Columns 0000

000148                                TSC-STAT ' ' REP-TSC-STAT
000149                                STOP RUN
000150                                END-EVALUATE.

```

C. REP-HEAD-PARA - Used to decorate the header of our report.

D. REP-COL-PARA- Used to decorate the column of our report.

E. REP-ENTRY-PARA - Used to add the entries to our report.

F. READ-FILE-PARA – Read para is used to read into file buffer from physical file, in our case we would read TSCR-FILE and also evaluate it with condition whether it is successful or giving an error Code.

```

000151 003800 READ-FILE-PARA.
000152 003900*   READ INTO FILE BUFFER FROM PHYSICAL FILE
000153 003900   READ TSCR-FILE.
000154 004000           EVALUATE TSC-STAT
000155 004100                   WHEN '00'
000156 004200                   DISPLAY 'TSCR-FILE READ DONE'
000157                                PERFORM PRINT-REP-PARA
000158 004300                   WHEN '10'
000159                                PERFORM REP-FOOTER-PARA
000160 003600                   PERFORM CLOSE-FILE-PARA
000161                                STOP RUN
000162                   WHEN OTHER
000163 004400                   DISPLAY 'ERROR READING TSCR-FILE : '
000164                                TSC-STAT
000165                                END-EVALUATE.

```

G. WRITE-FILE-PARA- Write para in our program is an optional para as we only use the para when we want to add the entry from through in-stream using COBOL but we are collecting it through KSDS file.

```

000166 004700 WRITE-FILE-PARA.
000167 001800     ACCEPT CUST-NAME OF TSCDT.
000168 001720     ACCEPT TRANSACTION-ID OF TSCDT.
000169 001900     ACCEPT MOBILE-NUMBER OF TSCDT.
000170 002000     ACCEPT PLAN-DETAIL OF TSCDT.
000171 001910     ACCEPT MAIL-ID OF TSCDT.
000172      *     WRITE TSCDT FROM TSCDT-ED.
000173      WRITE TSCDT.
000174 004900     EVALUATE TSC-STAT
000175 005000         WHEN '00'
000176 005100             DISPLAY 'OP FILE WRITTEN SUCCESFULLY'
000177 005000         WHEN '22'
000178 005100             DISPLAY 'INVALID KEY'
000179 001720*         DISPLAY TRANSACTION-ID OF TSCDT
000180 005200         WHEN OTHER
000181 005300             DISPLAY 'ERROR WRITING OP FILE' TSC-STAT
000182      END-EVALUATE.

```

H. REP-FOOTER-PARA- Used to decorate the footer of our report.

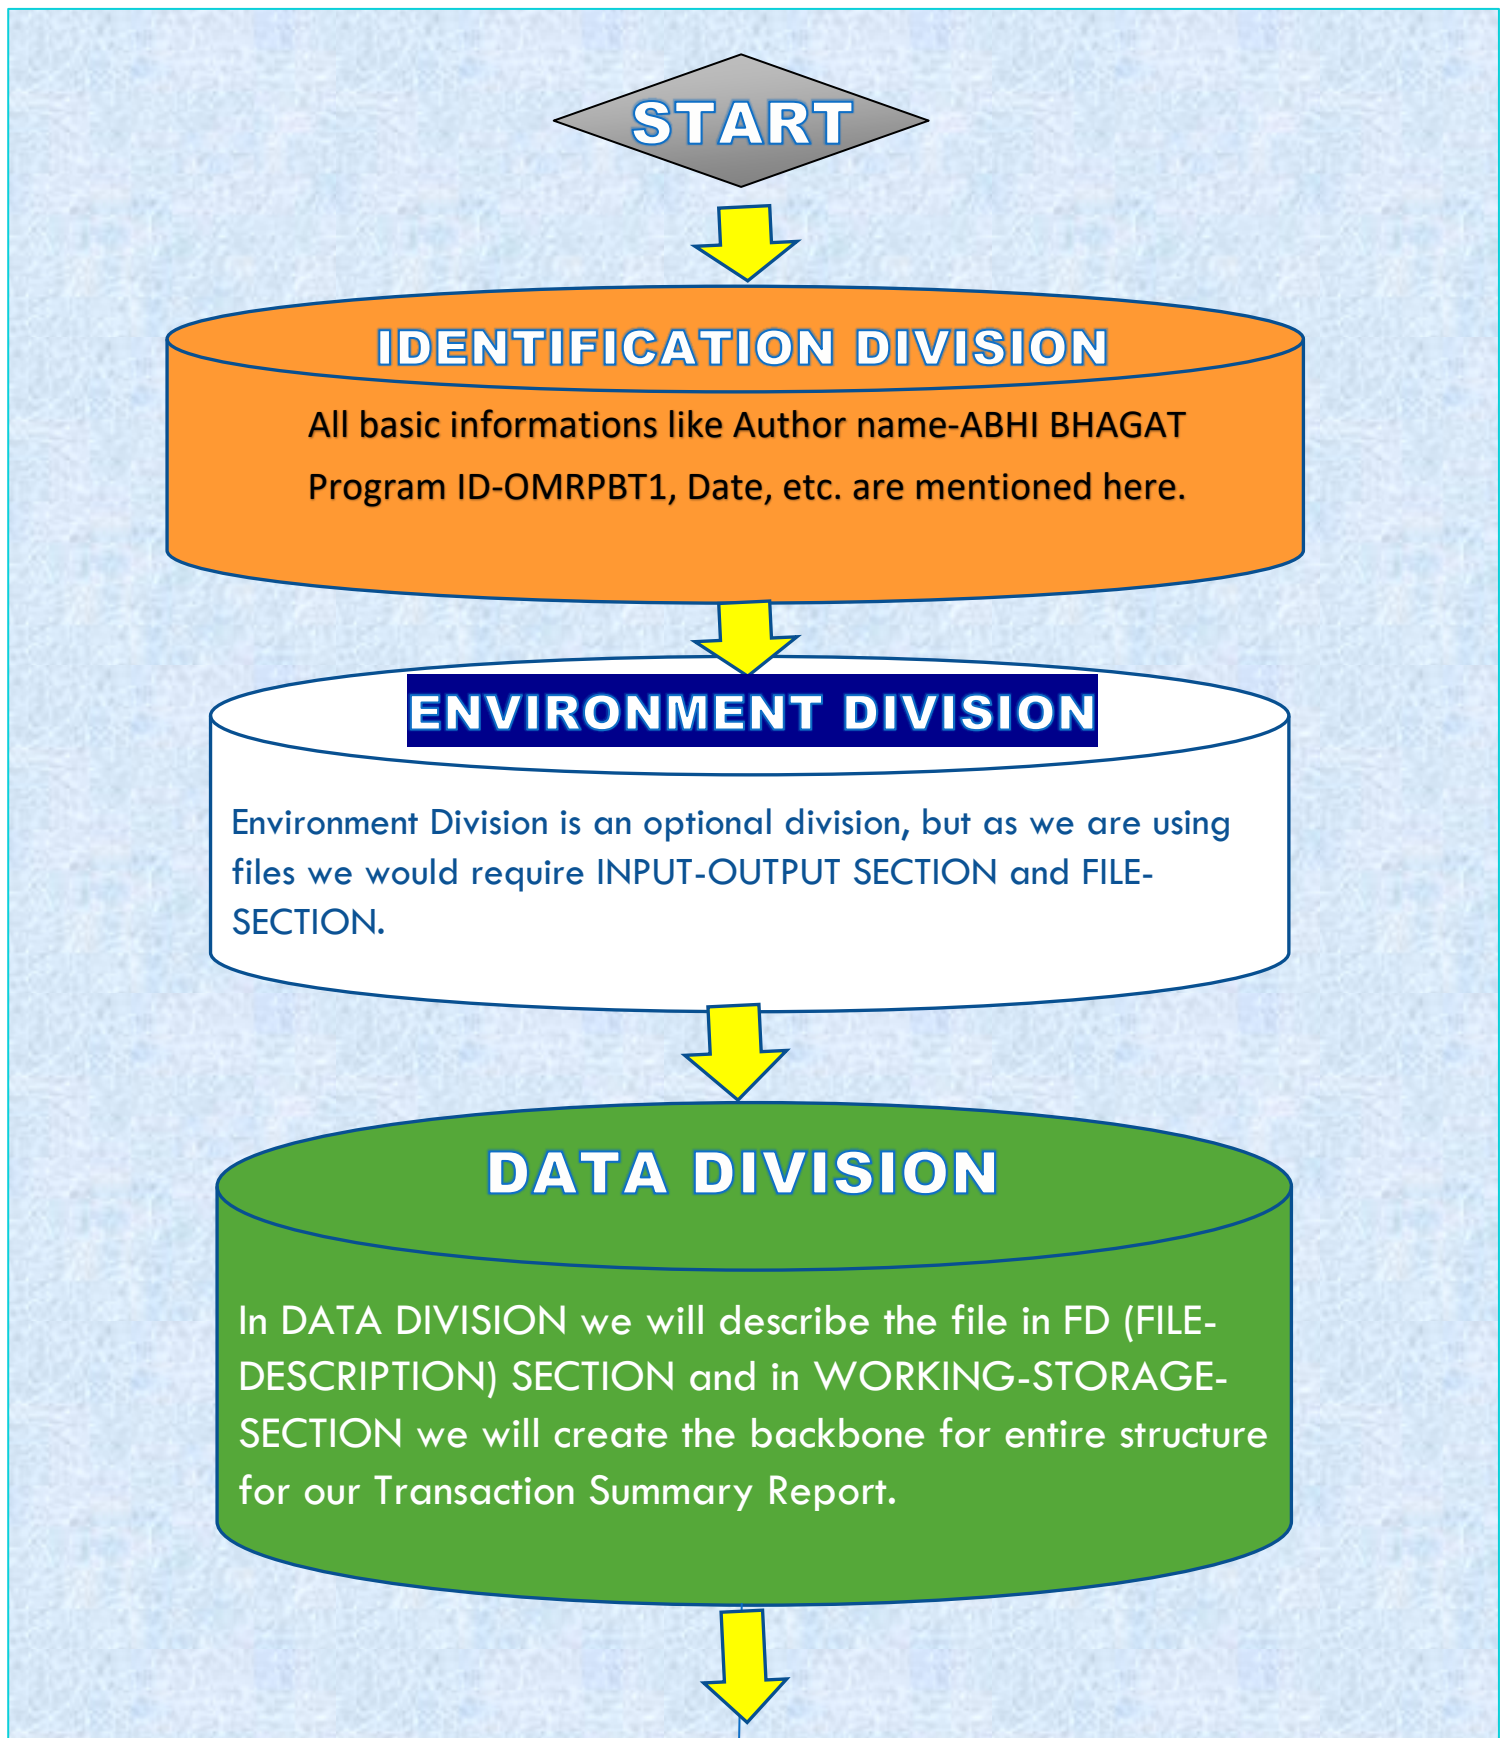

I. CLOSE-FILE-PARA- Close para is used to close TSCR-FILE and also evaluate it with condition whether it is successful or giving an error code.

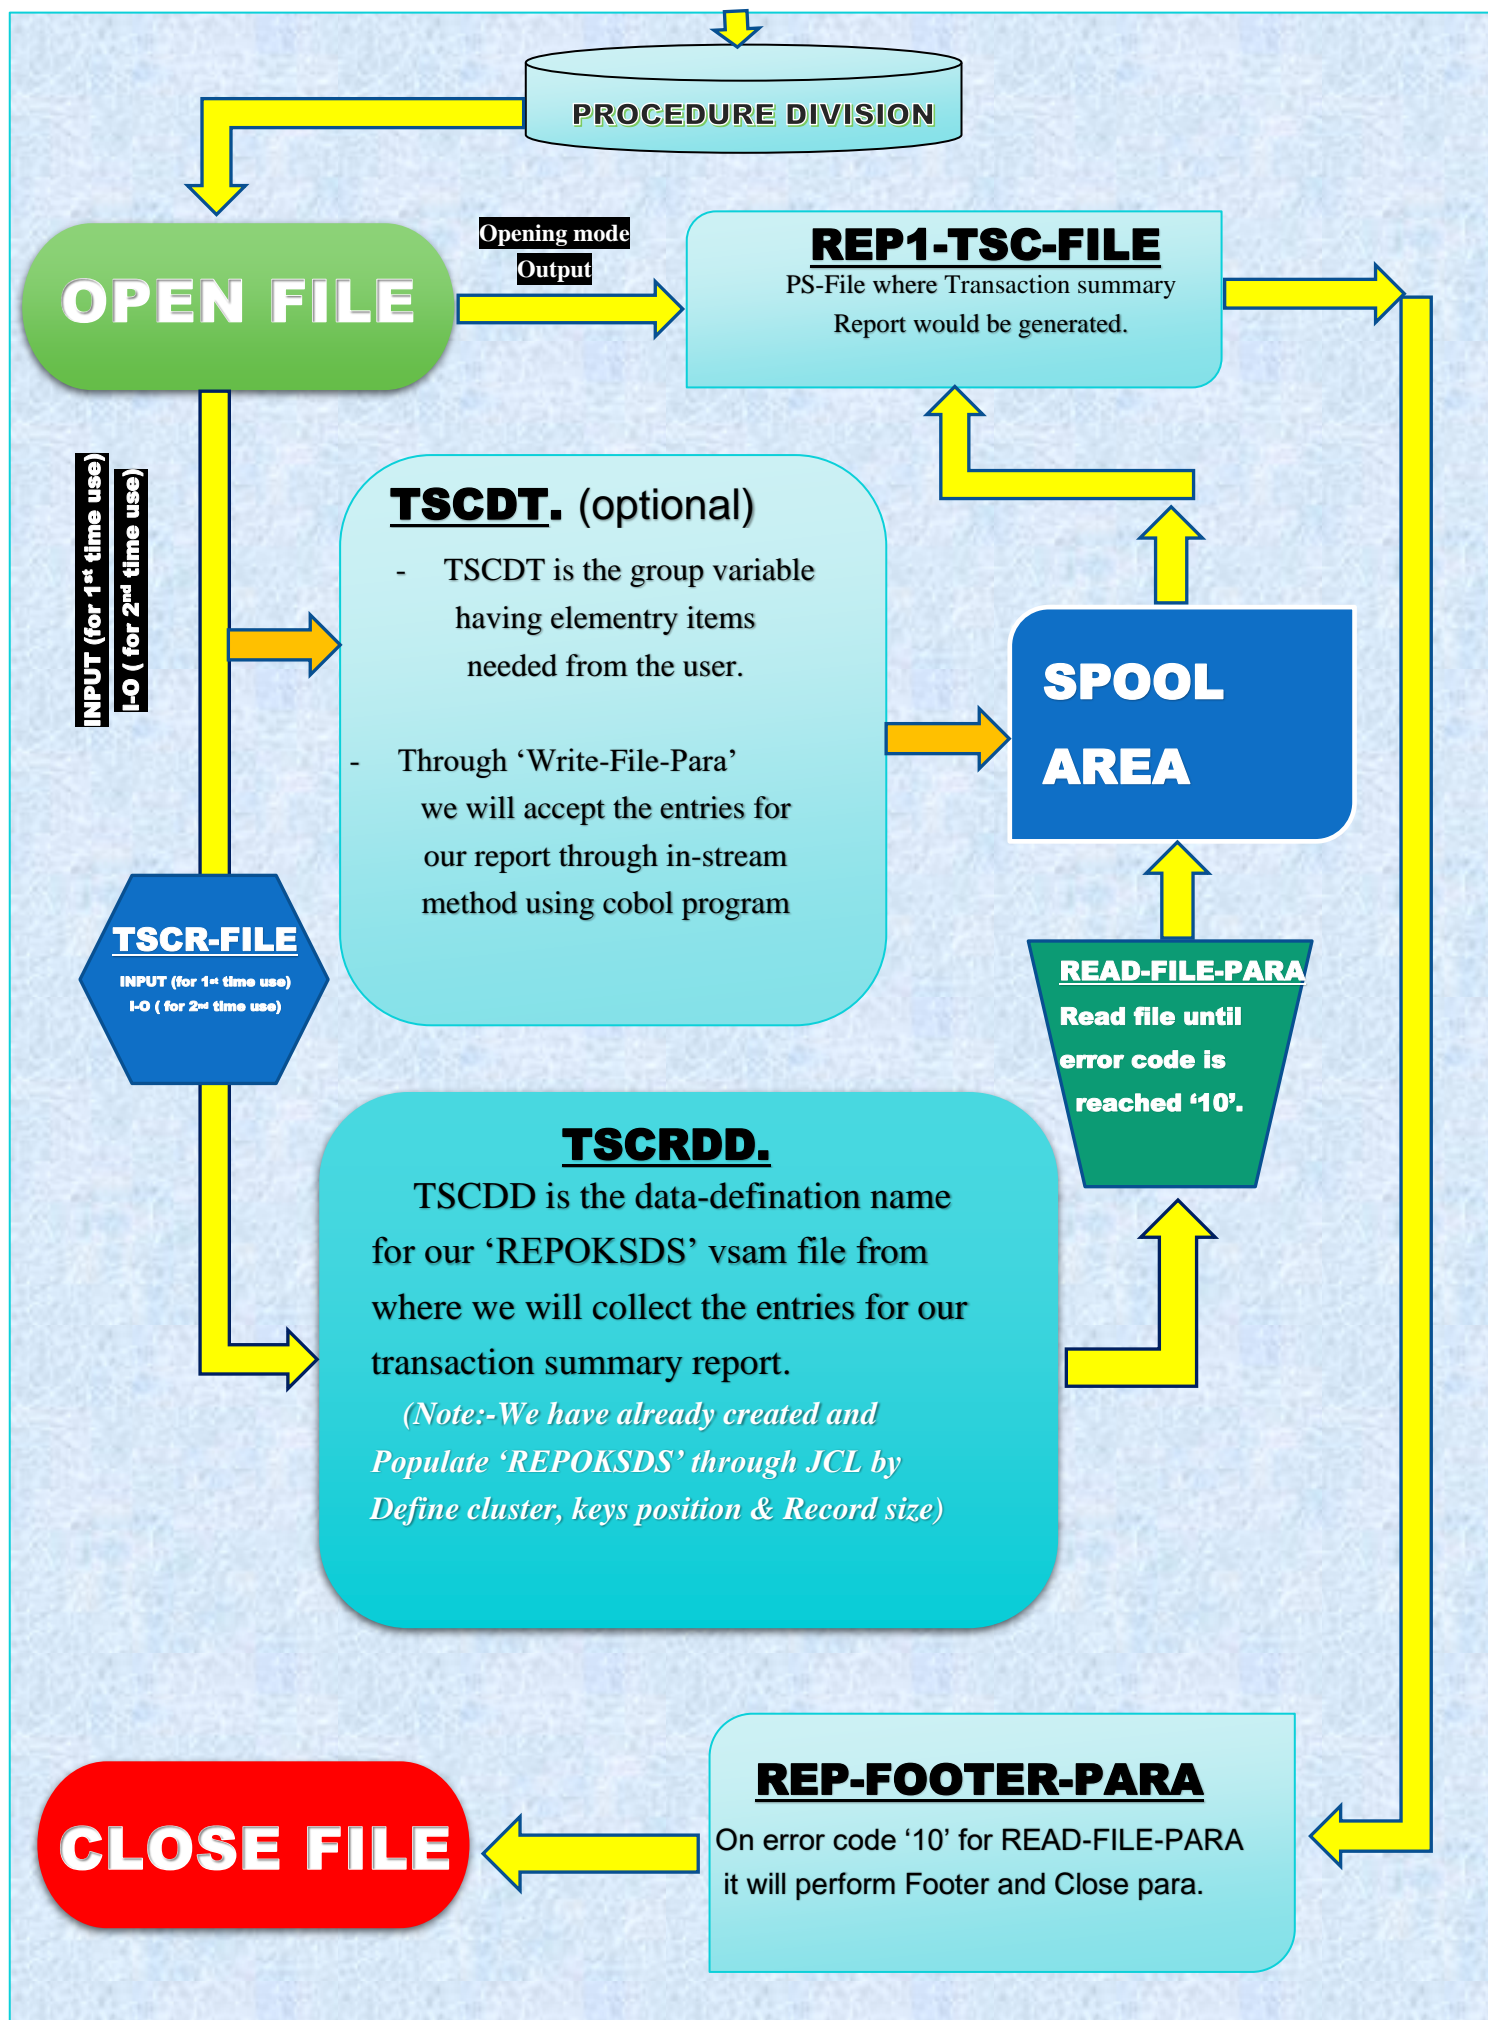

```

000188         WHEN OTHER
000189             DISPLAY 'ERROR CLOSE FILE :' TSC-STAT
000190             STOP RUN
000191     END-EVALUATE.

```

Algorithm through Flow-chart

Control Break or Page Break Logic

- For Page Break Logic we will use the concept of 'DIVIDE' and 'REMAINDER' to our variable SR-NO as here you can see the DIVIDE 3 INTO SR-NO denotes when the third entry of our report arrives it will break the page to next by control break way of application.

```

READ TSCR-FILE.
  EVALUATE TSC-STAT
    WHEN '00'
      DISPLAY 'TSCR-FILE READ DONE'
      PERFORM PRINT-REP-PARA
      DIVIDE 3 INTO SR-NO GIVING C REMAINDER B
      MOVE 0 TO SR-NO
      IF B = 00
        PERFORM REP-FOOTER-PARA
        DISPLAY 'PAGE BREAK DONE'
        PERFORM REP-HEAD-PARA
        PERFORM REP-COL-PARA
        MOVE 0 TO SR-NO
        CONTINUE
      END-IF

```

- As in SR-NO 3 it will give remainder of 0 through which we would execute REP-FOOTER-PARA, REP-COL-PARA and REP-HEAD-PARA.

```
